Date: 08/07/03
Subject: Geberit pipe and installation(s).

Let this letter serve as testimony from American Seafoods Company to what we have experienced and benefited from Pacific Pipe and Pump and their Geberit pipe installations.

Geberit piping is a revolutionary introduction for any industry operating with transport of: Most chemicals, brine, salt water, fresh water and sewage, either under pressure or vacuum.

Geberit piping is resistant to all conditions within parameters of dimensions stated by manufacturer for all the above-mentioned applications.

American Seafoods have converted a lot of processing lines from original galvanized steel piping, stainless 304 and 316 to Geberit piping. The installation is very favorable for several reasons:

- A) 1 time permanent installation. Once installed properly, it will last forever.
- B) Cost efficient material cost by far versus high quality materials like CuNiFe and S/S 316.
- C) Extremely beneficial installation cost and installation time.
- D) Very knowledgeable and willing staff supporting the product locally. (Pacific Pipe & Pump)

American Seafoods Company can testify to all our installations have been successful and recommend it for consumers searching for other reliable alternatives.

On behalf of
American Seafoods Company,

Roger Mjeltevik
Technical Director ASC
